CYLINDER BRACKETS

TECHNICAL BULLETIN

CYLINDER BRACKETS

The ETI heavy duty brackets for mounting foam cylinders must hold the foam cylinders tightly. These cylinder brackets are subject to a large amount of dynamic loads as machines negotiate rough terrain as well as movements in the machine.

Recently some crack failures of the base plate have been reported in extreme cases of cylinder brackets, particularly those holding 85 litre cylinders. Currently ETI is implementing two design changes.

- 1) The base plate will be increased from 5mm to 8mm plate thickness.
- 2) The bracket for 65 and 85 litre cylinders will also have an extra flat bar side brace added on both sides.

PART NUMBERS – CBTASSY045 (BASE PLATE ONLY)
– CBTASSY065/106 (BASE PLATE PLUS SIDE BRACES)

NB. This includes the above part numbers as part of complete cylinder kits when ordered.

Yours Truly

LEIGH WALDON
Chairman and Technical Director
